Class 12

Author: Prof. S. Banerjee

Published by NCERT Library for IAS

For educational use by UPSC aspirants

Contents

1. Understanding Society
2. Civics and Democratic Life
3. Economic Life

Chapter 1

Understanding Society

Society is a web of social relationships. Sociology studies how individuals and groups interact, form institutions and create shared meanings. Social structures such as family, caste, class and religion shape behavior and opportunities. Socialization transmits culture and norms across generations. Social change arises from factors such as technology, economy, ideology and collective action. Understanding society helps explain inequalities, conflicts and the possibilities for reform and justice.

Chapter 2

Civics and Democratic Life

Civics examines the rights and duties of citizens and the functioning of government. A democracy rests on popular sovereignty, rule of law, free elections and fundamental rights. Citizens participate through voting, public discussion, association and peaceful protest. Local self-government, including panchayats and municipalities, brings governance closer to people. Active and informed citizenship strengthens democracy and ensures accountability of those in power.

Chapter 3

Economic Life

Economic life encompasses the production, distribution and consumption of goods and services. People earn livelihoods through agriculture, industry, services and the informal sector. The economy is shaped by resources, technology, institutions and government policy. Issues such as poverty, unemployment and inequality require targeted interventions through welfare programs, education and skill development. Sustainable development balances economic growth with environmental protection and social equity.
